

PRE-LAUNCH CHECKLIST

What's left to *launch*.

A complete audit of every outstanding task — legal, technical, marketing, and operational — to take InTrackLog from MVP to legitimate, production-grade business.

V1.0 · 30 APRIL 2026

INTRACKLOG (PTY) LTD

INTRACKLOG.COM

PRODUCTION

22

POLISH &
MARKETING

Legal & Business Setup

MUST-HAVE

These admin tasks legitimise the business. Mostly non-coding — paperwork and registrations that need to happen before going live.

Register InTrackLog (Pty) Ltd with CIPC

Privacy Policy and Terms reference a "Pty Ltd" — needs to actually exist. Online registration via CIPC eServices.

~R 175

~5 DAYS

PayFast FICA approval

Without this, no real money can be processed. Currently waiting on PayFast verification of submitted documents.

IN PROGRESS

POPIA registration with Information Regulator

Legally required for SA businesses processing personal info. Free online registration at justice.gov.za/inforeg

FREE

~30 MIN

Designate an Information Officer

POPIA requires you name one (can be yourself initially). Documented internally and submitted with POPIA registration.

FREE

Open business bank account

Required for PayFast payouts. Use FNB, Nedbank, Standard Bank, or any SA business banking provider.

~3 DAYS

Tax clearance with SARS

Register the business for income tax. Apply at sars.gov.za

FREE

VAT registration

Only required if turnover exceeds R 1m/year — defer until you're approaching that threshold.

DEFER

Lawyer review of Privacy Policy & Terms

The drafts in the app are template-quality. A SA lawyer should review before public launch to ensure POPIA + consumer law compliance.

R 2K-5K

Everything required to get InTrackLog live on Google Play (and Apple App Store later).

Final app icon (replace placeholder)

~30 MIN

10+ designs already created in `icon-designs/`. Pick one, convert to 1024×1024 PNG, place in `assets/icon.png`.

Splash screen design

~30 MIN

Currently using a placeholder. Should match the chosen icon. Place in `assets/splash.png`.

Adaptive icon for Android

~15 MIN

Android requires a separate foreground image (108×108dp). Place in `assets/adaptive-icon.png`.

Google Play Developer account

\$25 ONCE

One-time fee. Sign up at `play.google.com/console`. Identity verification takes 1–2 days.

Apple Developer Program (for iOS)

\$99/YEAR

Annual fee. Only needed if launching on iOS. Can defer until Android has traction.

Store listing assets

~3 HOURS

5–8 phone screenshots, 1024×500 feature graphic, short description (80 chars), full description (4000 chars), category, content rating.

Data Safety / Privacy declaration

~30 MIN

Both stores require a questionnaire about exactly what data you collect (location, email, payment, etc.) and why.

Production Readiness

SHOULD-HAVE

Technical pieces that aren't strictly required to launch but make the business actually run reliably once users come.

PayFast IPN webhook (Edge Function)

~1 HR WORK

Critical for security — currently subscriptions update based on URL redirect. The IPN webhook verifies payments server-to-server before activating the plan.

Subscription expiry handling

~1 HR WORK

If a recurring payment fails (card expired, etc.), the app currently stays at the paid tier forever. Need logic to downgrade users on payment failure.

iOS build

~30 MIN BUILD

You have an Android APK. iOS requires Apple Developer account (\$99/yr) and EAS build for iOS profile.

Error tracking (Sentry / Bugsnag)

FREE

~30 MIN SETUP

When something breaks for a user, you currently have no visibility. Sentry has a generous free tier.

Production Supabase plan

\$25/MO

Free tier limits: 500MB DB, 1GB storage, 50,000 monthly active users. Pro plan adds backups, larger storage, support.

Custom email sender (Resend / SendGrid)

FREE

~1 HR SETUP

Currently password resets and team invites come from "noreply.supabase.co" — looks like spam to most filters. Resend has 3,000 free emails/month.

Analytics (PostHog / Mixpanel)

FREE

To know if users are actually using features, where they drop off, etc. Both have free tiers.

Database backup strategy

FREE W/ PRO

Supabase Pro includes automatic daily backups. Document recovery process.

Improvements that significantly upgrade the user experience but aren't blockers for launch.

First-time user onboarding tutorial

~1 HR WORK

A 3-4 slide intro shown once after signup that walks through the dashboard.

Empty state messaging

~30 MIN

When there are no vehicles, trips, or entries — currently mostly blank. Add helpful CTAs.

Background GPS tracking

~3 HRS WORK

Currently trips only track when app is open. True automatic detection requires native config + foreground service.

Receipt OCR (auto-fill expenses from photos)

~3 HRS WORK

Use Google Vision API or Tesseract.js to read amount/date from receipt photos.

Welcome email on signup

~30 MIN

Triggered when user verifies email. Includes user manual link, tips, support contact.

Multiple languages

FUTURE

English only currently. Adding Afrikaans, Zulu, Xhosa would broaden the SA market.

Offline mode

FUTURE

Queue trips/entries locally when no internet, sync when reconnected. Important for drivers in coverage gaps.

Accessibility audit

~2 HRS

Screen reader support, contrast ratios, font scaling, keyboard navigation on web.

Processes and systems for running the business day-to-day.

Customer support system

FREE OR PAID

Could be just a Gmail (support@intracklog.com) or a tool like Help Scout / Crisp.
Needed before users start emailing.

Refund policy + process

FREE

Document when refunds are issued (e.g. within 7 days, technical issues only). Required by consumer law.

Cyber liability insurance

~R 500/MO

Optional but recommended. Covers data breach incidents. SA brokers offer policies from ~R 500/month.

Account recovery process

FREE

If a user loses access entirely (lost phone, no email access). Manual verification process documented.

Subscription cancellation flow end-to-end

~1 HR

Currently switching tiers is local-only. Needs to also cancel the PayFast recurring billing.

Rate limiting / abuse prevention

~1 HR

Prevent signup spam, brute-force login attempts. Supabase has built-in rate limits — confirm they're active.

Everything that helps people find and choose InTrackLog. Important but doesn't block launch.

Real marketing landing page

~6 HRS

Currently intracklog.com is the app itself. A separate marketing page with hero, features, pricing, testimonials would convert visitors better.

Social media accounts

~30 MIN

Set up handles on Facebook, X (Twitter), Instagram, LinkedIn — even if not active yet, secure the names.

Promo video (30–60 seconds)

~4 HRS

Short demo video for the Play Store listing and social media. Can be screen recordings of you using the app.

Press kit

~2 HRS

PDF/page with logos, screenshots, descriptions for media. Lives at intracklog.com/press.

Email list / newsletter signup

~1 HR

Capture interested visitors who aren't ready to download. Use Resend / Mailchimp / Buttdown.

Affiliate / referral program

FUTURE

Reward existing users for bringing in new ones. Powerful for accountants/bookkeepers recommending to clients.

Code quality improvements. Doesn't block launch but pays dividends as the app grows.

Fix TypeScript error in dashboard

~10 MIN

One pre-existing type error in dashboard.tsx (VehicleResponse type mismatch). Doesn't break anything but should be cleaned up.

Unit tests for critical functions

~4 HRS

Especially mileage calculations, signature generation, subscription state transitions.

Integration tests for critical flows

~6 HRS

Signup, login, payment, trip logging, report generation. Catch regressions before they hit users.

Performance audit

~3 HRS

Lighthouse score for the web version, app startup time on low-end Android, list virtualization for large datasets.

Recommended *launch path*

If you want to launch within 4–6 weeks, focus on these tasks in this order.

Week 1-2

Essentials. Register Pty Ltd with CIPC. Submit POPIA registration. Wait for PayFast FICA to clear. Pick and finalise the app icon. Take 5–8 real screenshots from your phone.

Week 3-4

Store readiness. Set up Google Play Developer account (\$25). Build a production AAB. Submit for internal testing first, then production. Have lawyer review legal docs.

Week 5-6

Polish & launch. Set up error tracking (Sentry free). Build the PayFast IPN webhook for secure payment verification. Set up branded email sender (Resend free). Public launch — share the Play Store link.

Drive forward. Track smart.
